Attention: Patients with Parkinson's Disease

Do you feel like your thinking skills aren't as sharp as they have been?

If you have completed a clinical evaluation at the Parkinson's and Movement Disorders Center (PMDC) and received a diagnosis of PD, we would like to INVITE YOU to participate in a study at the PMDC. This study will investigate the benefits of a COMPUTERIZED memory or learning program for patients with PD who may be experiencing difficulties with thinking speed, concentration, memory, organization and thinking.

For 8 weeks participants will complete cognitive training exercises on their home or clinic provided computers for 60 minutes a day for 5 days a week. We are introducing this study to see if computer based cognitive training programs can help reduce attention, memory, organization and complex planning difficulties that individuals with PD sometimes experience.

If you are interested in participating, please contact the PMDC for more information and/or to sign up.

Dr. Sarah Lageman, Ph.D., ABPP/CN (Primary Investigator)
