Have you been diagnosed with Parkinson's disease and take levodopa?

We are currently enrolling participants in a clinical research study to determine whether a new drug will improve your digestion and response to levodopa.

The study:

- Is recruiting men and women over 18 who have been diagnosed with Parkinson's disease and who take levodopa.

- Involves 4 study visits. During 2 of these visits you will receive the study drug prior to taking your morning dose of levodopa. We will then study how your body processes and responds to the levodopa.

There will no charge to you for your participation and you will be compensated for your time and travel.
